

Purpose:

Add automatic crediting of participation for a web based Open Sesame project hosted on the JATOS platform. This document assumes you are familiar with the SONA system in a researcher capacity.

Notes: It is advisable to construct and test your study fully before implementing the following as the OS experiment will not run locally once you have done so as the JATOS script files are not added until you export the zip file.

STEP 1:

Add an inline_javascript file to the beginning and end of your experiment as shown below:

STEP 2:

To the SONA_URL_inline_javascript add the following line of code:

```
vars.participant_URL_ID = jatos.urlQueryParameters.id
```

Notes: The vars object is used to access existing variables or create new ones such as 'participant_URL_ID' in the above.

STEP 3:

To the RETURN_SONA_URL_inline_javascript add the following line of code:

```
jatos.endStudyAndRedirect("https://uopsop.sona-  
systems.com/webstudy_credit.aspx?experiment_id=3962&credit_token=ab77f61d354a4248bad7  
df793a7d4bd4&survey_code=" + vars.participant_URL_ID);
```

Notes: The above web address is retrieved from your study detail 'completion URLs section' (client side version) and you are simply replacing the XXXX with your inline_javascript variable.
